# SNS Home Inspections LLC Property Inspection Report

Inspection prepared for: Mickey Mouse Inspection Address: 11234 Snow White Dr Disney World 12345

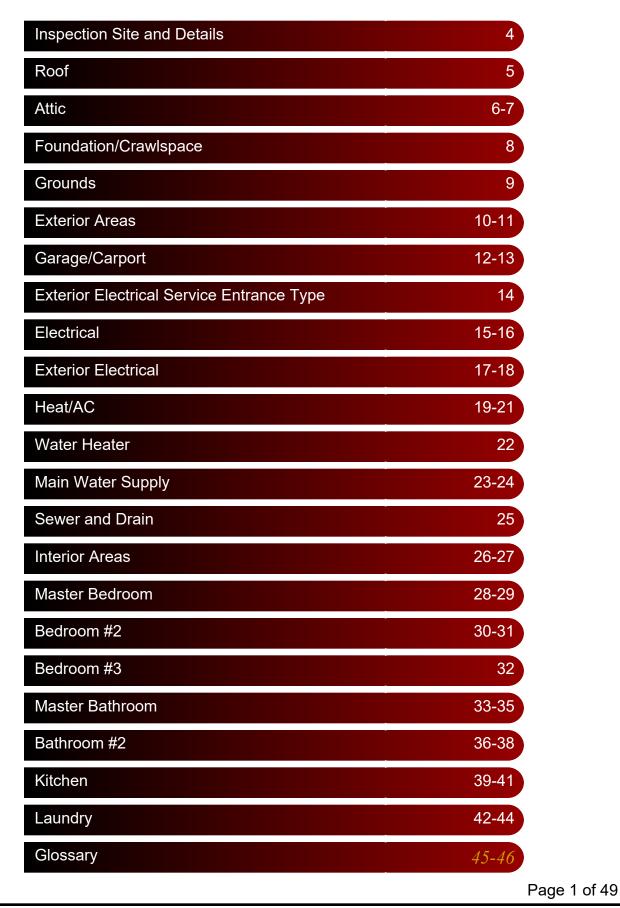

Date: 1/1/2022 Age of Home: 1994 Real Estate Agent: Order ID: 0

e: 1/1/2022 Time: 12:00 PM e: 1994 Size of Home: 2516 sqft ate Agent: Weather: sunny Order ID: Order ID: 14354

Inspector: Michael Bitterman License # HI 7792 InterNACHI # NACHI13012003 1080 Madura Dr, Deltona, FL 32725 Phone: 407-878-7808 Email: office@snsinspections.com www.snsinspections.com

NOTICE TO THIRD PARTIES: This report is the exclusive property of SNS Home Inspections LLC and the Client(s) listed above and is not transferable to any third parties or subsequent buyers. Our inspection and this report have been performed with a written contract agreement that limits its scope and usefulness. Unauthorized recipients are therefore advised not to rely upon this report, but rather to retain the services of an appropriately qualified home inspector of their choice to provide them with their own inspection and report.

#### **Table Of Contents**

Report Summary

47-49

#### Ratings and how to view this report

This report uses a check box style ratings system with narratives to describe the condition of various areas and systems within and around the home. There are many systems in a home that if functioning properly do not warrant the use of a narrative which is why we use this ratings system. You as the homeowner can view this report and be sure that a system has been inspected, and opinion given on its condition.

The following is an explanation of our ratings system:

**SAT = Satisfactory / Inspected**: Means that an item or system was inspected and functioned or appeared normal at the time of inspection. This does not mean that the item or system is defect free, it means the item or system operated, functioned, or otherwise was acceptable taking age, condition, intended function, etc. into consideration. This is by no means expressing or implying any warranties of any kind. Systems and/or components may fail at anytime without warning. This also is not an indication of life expectancy.

**REP = Repair:** Means that an item or system may have functioned to some degree or not at all, but in the opinion of inspector can be repaired rather than recommending replacement. (i.e. a leaking faucet, loose hardware, items that could be improved by cleaning etc.)

**RPL = Replace**: Means that an item or system is not working or damaged beyond normal repair. In the opinion of inspector replacement would be the best option taking cost of repair vs replacement, safety, efficency, etc into consideration.

**SC = Safety Concern**: When this box is checked, it normally means some form of safety issue is present. This could be just a suggestive improvement, a warning that a danger or possible danger could exist, to a very serious hazard. It is very important you read the report and all narratives completely.

**None = None / Not Inspected:** This is selected when the item does not exist or item was not able to be inspected for a specific reason. If item was unable to be inspected, reason(s) will given within this report. Examples might be access to a specific area was to small or inaccessible to enter or inspector felt safety was a concern or property damage might take place (i.e. attic, crawlspace, roof to high or steep). A system or item was shutdown, not installed completely, or under going service (i.e. an appliance that is not wired in, HVAC system that has gas or power shut off to unit). NOTE: The above mentioned examples are just that, examples, many other circumstances may become a factor and will addressed on a case by case basis.

If for any reason you have questions regarding the rating system or any other parts of this report, please do not hesitate to call us at 407-878-7808. We will be glad to help explain any concerns or questions you may have.

Thank you SNS Home Inspections LLC

|                      |  |

#### Roof

As with all areas of a structure, we recommend that you carefully examine the roof immediately prior to closing the deal. Adequate attic ventilation, solar / wind exposure, and organic debris all affect the life expectancy of a roof. Always ask the seller about the age and history of the roof. During the inspection, the inspector will note any areas that appeared damaged, show excessive wear, or otherwise require the attention of a roofing contractor. We do not recommend the client/buyer access the roof. We do recommend a roofing contractor make any repairs that might be necessary.

| 1. Roof Condition   |
|---|
| SAT       REP       RPL       SC       None         X       Inspection Method:       Was able to walk on roof         Materials:       Asphalt shingles noted.         Observations:       Observations:         • No major system, safety or function concerns noted at time of inspection, roof looks good for it's age.  |
| 2. Flashing and Plumbing Vents  |

|   |

#### Attic

This section of the report describes the method used to inspect any accessible attics; and describes the insulation and vapor retarders used in unfinished spaces when readily accessible and the absence of insulation in unfinished spaces at conditioned surfaces. Inspectors are required to inspect insulation and vapor retarders in unfinished spaces when accessible and passive/mechanical ventilation of attic areas, if present.

| ventilation of attic areas, if present.  |    |  |  |  |
|--|----|--|--|--|

#### **Exterior Electrical Service Entrance Type**

This section describes the amperage and voltage rating of the service, the location of the main disconnect and any sub panel(s), the presence of solid conductor aluminum branch circuit wiring. Inspectors are required to inspect the viewable portions of the service drop from the utility to the structure, the service entrance conductors, cables and raceways, the service equipment and main disconnects, the service grounding, the interior components of the service panels and sub panels, the conductors, the over-current protection devices (fuses or breakers), ground fault circuit interrupters and a representative number of installed lighting fixtures, switches and receptacles. All issues or concerns listed in this Electrical section should be construed as current and a potential personal safety or fire hazard. Repairs should be a priority, and should be made by a qualified, licensed electrician.

#### 1. Overhead Service Drop

• No major system safety or function concerns noted at time of inspection.

#### 5. Exterior Wiring

X REP RPL SC None

Observations: • No major system, safety or function concerns noted at time of inspection.

#### Heat/AC

The heating, ventilation, and air conditioning and cooling system (often referred to as HVAC) is the climate control system for the structure. The goal of these systems is to keep the occupants at a comfortable level while maintaining indoor air quality, ventilation, while keeping maintenance costs at a minimum. The HVAC system is usually powered by electricity and/or natural gas, but can also be powered by other sources such as butane, oil, propane, solar panels, or wood. The inspector will usually test the heating and air conditioner using the thermostat or other controls. For a more thorough investigation of the system please contact a licensed HVAC service person.

#### Main Water Supply

#### 1. Main Water Supply Condition

None

- SAT REP RPL SC
- Source of Water and Type of Plumbing:
- Public water supply noted
- Copper piping noted.
- <u>PVO</u> piping noted.
- **Observations:**

• Most water supply lines are not visible due to finished surfaces. Only visible areas can be inspected. Of the areas inspected the system appeared satisfactory at the time of inspection.

• There is a well pump present in the backyard. It appears that the home was on a well at some point. This system does not appear to be in service at this time. Recommend further evaluation by a qualified contractor if buyer would like to use this for irrigation possibly.

- Damaged electrical outlet observed in the exterior closet.
- Exterior closet that contains the water treatment system shows signs of significant wood rot. It appears to be near the end of its useful life. Recommend replacement.

Main water shut off is in the meter box at the street

Exterior closet that contains the water treatment system shows signs of significant wood rot. It appears to be near the end of its useful life. Recommend replacement.

Damaged electrical outlet observed in the exterior closet.

#### **Interior Areas**

The Interior section covers areas of the structure that are not considered part of the Bathrooms, Bedrooms, Kitchen or areas covered elsewhere in the report. Interior areas usually consist of hallways, foyer, living room, family room and other open areas. Within these areas the inspector is performing a visual inspection and will report visible damage, excessive wear and tear, and moisture problems if seen. Personal items in the structure may prevent the inspector from viewing all areas on the interior. The inspector does not usually test for mold or other hazardous materials. A qualified expert should be consulted if you would like further testing.

#### 1. Locations

- This section covers the remainder of living spaces
- Living room
- Front entrance
- Dining room
- Hallway
- Bonus room at the rear of home

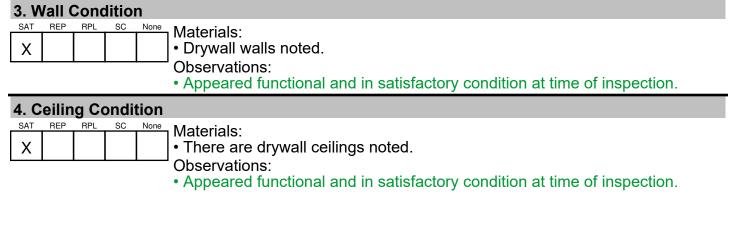

## 2. Floor Condition

It is also advised that this inspection be conducted by a chimney sweep certified by the Chimney Safety Institute of America (www.csia.org).</li> </ul> </li> </ul> |

#### **Master Bedroom**

The main area of inspection in the bedrooms is the structural and electrical systems. This means that all walls, ceilings and floors will be inspected. A representative number of lights and outlets will be inspected. A representative number of doors and windows will also be inspected for normal operation or damage. Personal items in the bedroom may prevent all areas from being inspected as the inspector will not move personal items.

#### Master Bathroom

Bathrooms can consist of many features from jacuzzi tubs and showers to toilets and bidets. Because of all the plumbing involved it is an important area of the house to look over. Moisture in the air and leaks can cause mildew, wallpaper and paint to peel, and other problems. The home inspector will identify as many issues as possible but some problems may be undetectable due to problems within the walls or under the flooring..

#### Glossary

| Term             | Definition  |
|------------------|---|
| Anti-tip bracket | Anti-tip brackets are metal devices designed to prevent<br>freestanding ranges from tipping. They are normally attached to<br>a rear leg of the range or screwed into the wall behind the range,<br>and are included in all installation kits. A unit that is not equipped<br>with these devices may tip over if enough weight is applied to its<br>open door, such as that from a large Thanksgiving turkey, or<br>even a small child. A falling range can crush, scald, or burn<br>anyone caught beneath. |
| GFCI             | A ground fault circuit interrupter (GFCI) is a device that shuts off<br>an electric circuit when it detects that current is flowing along an<br>unintended path, possibly through water or through a person. It is<br>used to reduce the risk of electric shock.  |
| HVAC             | Abbreviation for heating, ventilation, and air conditioning system  |
| PVC              | Polyvinyl chloride, which is used in the manufacture of white plastic pipe typically used for water supply lines.   |

We appreciate the opportunity to conduct this inspection for you! Please carefully read your entire Inspection Report. Call us after you have reviewed your report, so we can go over any questions you may have. Remember, when the inspection is completed and the report is delivered, we are still available to you for any questions you may have, throughout the entire closing process. Properties being inspected do not "Pass" or "Fail." - The following report is based on an inspection of the visible portion of the structure; inspection may be limited by vegetation and possessions. Depending upon the age of the property, some items like GFI outlets may not be installed; this report will focus on safety and function, not current code. This report identifies specific non-code, non-cosmetic concerns that the inspector feels may need further investigation or repair.

For your safety and liability purposes, we recommend that licensed contractors evaluate and repair any critical concerns and defects. Note that this report is a snapshot in time. We recommend that you or your representative carry out a final walk-through inspection immediately before closing to check the condition of the property, using this report as a guide.

A Property Inspection is a non-invasive visual examination of a structure, performed for a fee, which is designed to identify observed material defects within specific components of said structure. Components may include any combination of mechanical, structural, electrical, plumbing, or other essential systems or portions of the structure, as identified and agreed to by the Client and Inspector, prior to the inspection process.

A property inspection is intended to assist in evaluation of the overall condition of the structure. The inspection is based on observation of the visible and apparent condition of the structure and its components on the date of the inspection and not the prediction of future conditions. A property inspection will not reveal every concern that exists or ever could exist, but only those material defects observed on the day of the inspection.

A material defect is a condition with a real property or any portion of it that would have a significant adverse impact on the value of the real property or that involves an unreasonable risk to people on the property. The fact that a structural element, system or subsystem is near, at, or beyond the end of it's normal useful life is not by itself a material defect.

An Inspection report shall describe and identify in written format the inspected systems, structures, and components of the dwelling and shall identify material defects observed. Inspection reports may contain recommendations regarding conditions reported or recommendations for correction, monitoring or further evaluation by professionals.

#### **Report Summary**

The summary below consists of potentially significant findings. These findings can be a safety hazard, a deficiency requiring major expenses to correct or items I would like to draw extra attention to. The summary is not a complete listing of all the findings in the report, and reflects the opinion of the inspector. Please review all of the pages of the report as the summary alone does not explain all the issues. All repairs should be done by a licensed and insured trade professional. I recommend obtaining a copy of all receipts, warranties and permits for the work done. Please feel free to contact SNS Home Inspections LLC at anytime with any questions or concerns you might have regarding this report and it's findings at 407-878-7808.

| Attic                     |                                 |   |  |  |  |
|---------------------------|---------------------------------|---|--|--|--|
| Page 7 Item: 10           | Chimney                         | • Evidence of past or present leaks and wood rot observed.<br>Area appeared to be dry at the time of inspection.<br>Recommend further evaluation by a qualified contractor.   |  |  |  |
| Grounds                   |                                 |   |  |  |  |
| Page 9 Item: 3            | Vegetation<br>Observations      | • Prune or remove any plants that are in contact or proximity to home to eliminate pathways of wood destroying insects.   |  |  |  |
| Exterior Areas            | -                               |   |  |  |  |
| Page 11 Item: 10          | Sliding Doors                   | <ul> <li>The doors hardware is showing signs of wear and may be at the end of its useful life. We recommend budgeting for replacement.</li> <li>Door is difficult to operate, this presents a safety hazard in the event of an emergency/fire. Recommend repair/adjusting of door by a Qualified Contractor to allow easy and smooth operation. Current building standards require this second means of egress in the event of an emergency.</li> </ul> |  |  |  |
| Page 11 Item: 11          | Window Condition                | Some window screens are missing.  |  |  |  |
| Electrical                |                                 |   |  |  |  |
| Page 15 Item: 2           | Main Service Panel<br>Condition | <ul> <li>Open breaker panel slot(s) at panel box cover.</li> <li>Electrocution hazard.</li> </ul>   |  |  |  |
| Page 15 Item: 3           | Sub Panel<br>Condition          | <ul> <li>Double tapped connections inside panel box (more than<br/>one electrical conductor attached to a single screw and/or<br/>lug). This is not standard practice, and may cause<br/>overheating or even an electrical fire. Recommend<br/>evaluation by an electrician.</li> <li>Open breaker panel slot(s) at panel box cover.<br/>Electrocution hazard.</li> </ul>   |  |  |  |
| <b>Exterior Electrica</b> | al                              |   |  |  |  |
| Page 17 Item: 1           | Exterior Outlets                | <ul> <li>Reversed polarity, hot and neutral reversed and other terms used for electric receptacles are usually easily corrected by minor wiring adjustments at the specified item. When these conditions are noted in this report, a licensed electrician should be consulted for repairs/replacement as needed to ensure safety.</li> <li>Outlet at the front porch did not have power.</li> </ul>   |  |  |  |
| Page 17 Item: 2           | Exterior GFCI                   | • All outdoor receptacles are not GFCI protected, need to be updated.   |  |  |  |
| Page 17 Item: 3           | Exterior Lights                 | Damaged light fixtures observed.  |  |  |  |
|                           |                                 | Page 47 of 49   |  |  |  |

| Heat/AC          |                                |  |
|------------------|--------------------------------|--|
| Page 19 Item: 3  | AC Compressor(s)<br>Condition  | <ul> <li>The air conditioner did not cool the home properly.<br/>Recommend <u>HVAC</u> contractor evaluate and repair the system.</li> <li>Exterior unit not level. This can affect system performance.</li> </ul>   |
| Page 20 Item: 4  | Air Handler(s)<br>Condition    | <ul> <li>Unit appears dirty and shows no signs of regular service.<br/>Recommend <u>HVAO</u> technician clean and tune system.</li> <li>Air handler is original when home was built. Although unit did function at time of inspection, unit has passed it's expected lifespan. Buyer should to budget for replacement in near future.</li> </ul> |
| Page 20 Item: 6  | Registers                      | • Air flow weak at multiple registers. We recommend further evaluation by a licensed <u>HVAC</u> technician. Some registers have the air flow restricted.  |
| Page 21 Item: 7  | Filters                        | No filter present at time of inspection.   |
| Main Water Supp  | bly                            |  |
|                  | Main Water Supply<br>Condition | <ul> <li>Damaged electrical outlet observed in the exterior closet.</li> <li>Exterior closet that contains the water treatment system<br/>shows signs of significant wood rot. It appears to be near the<br/>end of its useful life. Recommend replacement.</li> </ul>   |
| Interior Areas   | -                              |  |
| Page 26 Item: 2  | Floor Condition                | • Minor damage noted.  |
| Page 27 Item: 11 | Smoke Detectors                | • The smoke detector did not operate during the inspection.  |
| Master Bedroom   |                                |  |
| Page 29 Item: 10 | Smoke Detectors                | <ul> <li>No smoke or fire detector was installed at time of<br/>inspection.</li> </ul>   |
| Bedroom #2       |                                |  |
| Page 30 Item: 7  | Closets                        | • Stains were present on the closet ceilings indicating prior water infiltration. Although they tested dry they should be noted.   |
| Page 31 Item: 10 | Smoke Detectors                | <ul> <li>No smoke or fire detector was installed at time of<br/>inspection.</li> </ul>   |
| Bedroom #3       | -                              |  |
| Page 32 Item: 9  | Ceiling Fans                   | The fan blades wobble when tested.   |
| Page 32 Item: 10 | Smoke Detectors                | <ul> <li>No smoke or fire detector was installed at time of<br/>inspection.</li> </ul>   |
| Master Bathroon  | n                              |  |
| Page 34 Item: 15 | Enclosure                      | • Loose tiles noted. Recommend review by a licensed contractor for repair or replacement.  |
| Bathroom #2      |                                |  |
| Page 37 Item: 16 | Sink Supply                    | • Faucet handle is loose.  |
| Page 37 Item: 17 | Sink Drains                    | Drain line leaks under sink.   |
| Kitchen          |                                |  |
| Page 39 Item: 8  | Electrical                     | <ul> <li>Exposed wiring observed under the sink.</li> <li>3 way switch in the kitchen is incorrectly wired.</li> </ul>   |

| Page 40 Item: 9  | GFCI         | • GFC tested and functioned properly, however not all outlets in kitchen are GFC protected. Recommend all outlets be updated to GFC.  |  |
|------------------|--------------|---|--|
| Page 40 Item: 10 | Dishwasher   | • The dishwasher did not operate when tested, consult with the seller about servicing the unit.   |  |
| Page 41 Item: 15 | Oven & Range | • <u>Anti-tip bracke</u> is missing from range installation. See label<br>inside oven door. All free-standing, slide-in ranges include an<br>anti-tip device and is essential in the safe operation of the<br>range. It provides protection when excess force or weight is<br>applied to an open oven door. Carried by home building<br>centers.  |  |
| Laundry          |              |   |  |
| Page 42 Item: 8  | Plumbing     | <ul> <li>Rubber washer supply lines noted. They have been known to rupture. Recommend replacement with reinforced braided steel lines.</li> <li>Washing machine drains outside on ground. This is an improper means of disposing of washing machine waste water, washing machine should drain into proper septic or sewer lines. Recommend a licensed plumber evaluate and suggest repair options.</li> </ul> |  |
| Page 43 Item: 10 | Dryer Vent   | The dryer vent pipe is damaged.   |  |
| Page 44 Item: 12 | GFCI         | <ul> <li>No GFC protection present, suggest installing GFC protected receptacles for safety.</li> </ul>   |  |
